- Piedras: 19/09/2022

- Jose Luis: 22/09/2022

Alcohol content: 14,27% vol.

Total acidity: 4,8 g/L

pH: 3,78

Production: 10.382 bottles of 75 cl

Market launch: July 2023

Elaboration

The grapes were harvested by hand and placed in 10 kg boxes. These boxes are cooled to 3°C. The grapes are manually controlled on a selection table. After passing through the destemmer, the grapes go into small fermentation tanks by gravity. Spontaneous fermentation with native yeasts. Cap punching down once or twice a day for about 3 weeks. The barrels are filled directly from the fermentation tanks. Malolactic fermentation in barrels. We use very fine grain french barrels from the Chassin cooperage, Jupilles forest, and the Cavin cooperage, Chatillon forest. The toasting is very slow and very light. We look for a very soft, elegant wood contribution and the clear predominance of the impact of the fruit and the terroir.

The wine remained in barrels 12 months. It is not stabilized, nor is it clarified. We did a very light filtering before bottling.
